PROFESSIONAL SUMMARY

Computer Science undergraduate specializing in DevOps, with hands-on experience in cloud infrastructure, CI/CD pipelines, containerization, and automated deployments. Experienced with AWS, Azure, Docker, Kubernetes, Terraform, and Jenkins. Driven problem-solver focused on building scalable, reliable systems through practical engineering and infrastructure automation.

TECHNICAL SKILLS & CORE COMPETENCIES

Programming & Core CS: C++, Python, Data Structures & Algorithms, REST APIs, Linux CLI, Bash

Cloud & Infrastructure: AWS (EC2, S3, VPC, ALB, Route 53, ACM, RDS), Azure (AKS, ACR), Docker, Kubernetes, Terraform

DevOps & Observability: Jenkins, ArgoCD (GitOps), Nginx, Prometheus, Grafana, k6, Git

Core Competencies: Technical Communication, Workflow Automation, Infrastructure as Code, End-to-End System Design

FEATURED PROJECTS

CloudOpt AI

[\[View Project\]](#)

Python (FastAPI), Docker Compose, Prometheus, Grafana, k6

- Architected a local-first cloud measurement platform isolating backend API workloads from telemetry collection pipelines.
- Executed 9 validated k6 experiments across 3 CPU/memory tier configurations under varied load profiles, identifying CPU saturation as the root cause of a 17–28x p95 latency surge at 0.25 CPU / 128 MB limits.
- Designed threshold-based recommendation scripts in Python to evaluate workload allocations against target SLA thresholds.

Azure GitOps CI/CD Pipeline

[\[View Project\]](#)

Terraform, Azure Container Registry (ACR), Azure Kubernetes Service (AKS), Jenkins, ArgoCD, Nginx

- Automated cloud infrastructure provisioning on Azure Kubernetes Service (AKS) using modular Terraform configurations.
- Integrated Jenkins build pipelines with Azure Container Registry (ACR) and ArgoCD GitOps continuous deployment to AKS.

Real-time Chat App on AKS

[\[View Project\]](#)

Docker, Kubernetes (AKS), Azure Container Registry, Jenkins, Prometheus, Grafana

- Orchestrated containerized application services on Azure Kubernetes Service automated through Jenkins deployment pipelines.
- Configured Prometheus metrics scrapers and Grafana monitoring dashboards for real-time cluster health and resource tracking.

Automated AWS Infrastructure Deployment

[\[View Project\]](#)

AWS (VPC, EC2, RDS, ALB, Route 53, ACM), Terraform, Jenkins, Python (Flask)

- Provisioned secure AWS network topology deploying Python Flask services on EC2 alongside database resources within a custom VPC.
- Configured Application Load Balancer routing, Route 53 DNS records, ACM SSL certificates, and automated Jenkins pipelines.

Static Website Hosting on AWS

[\[View Project\]](#)

AWS S3, Route 53, ACM, Application Load Balancer, EC2

- Hosted custom domain static assets on S3 integrated with Route 53 DNS routing and ACM SSL/TLS certificate management.
- Configured Application Load Balancer path-based routing rules to direct incoming web traffic to target backend instances.

EDUCATION, CERTIFICATIONS & LANGUAGES

Bennett University — B.Tech in CSE (DevOps Specialization) — CGPA: 7.12

08/2023 – 08/2027

Gurukul School — Senior Secondary Education

03/2011 – 03/2023

Industry Certifications: Peer-to-Peer Protocols & LANs (Univ. of Colorado) | Operating Systems: Power User (Google) | Digital Electronics (Infosys) | Machine Learning Fundamentals (IBM)

Languages: English (Professional), Hindi (Native)
